

# **NOI 2020 C++ Basics Course Assignments**

## **Assignment 1**

Upto note 4

### **Task 1**

Create a cpp application that will print your name into the console.

### **Task 2**

Create a cpp application that will declare variables to store values of following types and initialize them with values of your choice.

- Boolean values
- Character values
- Integer values (declare and initialize two variables in the same statement)
- Floating point values
- Larger floating point values

### **Task 3**

Upgrade the code from task 2 to print all the created variables into the console screen each on a separate line.

### **Task 4**

Write a program to print the addition of two user input numbers
